

a AgentNet relay architecture and task lifecycle

The relayed entry flow of authentication, Agent Number assignment, routes asynchronous tasks, and records audit evidence.

b Current validation evidence

Latest states-machine: OpenClaw sub-agent supports controlled launch, private-beta and small pilot usage; public production still needs real HTTPS/WSS staging verification.

20/20	30 min	15 agents	1,000	Backup &	WSS staging	Do not
test suite pass rate identity, security, approval	900 cycles long stability 0 drops	8,114 hb combined stress tasks + churn	0 errors pure write pressure P95 < 2s, no leak	restore OK restore + healthz audit + migration	not proven yet real domain verification production fallback broken	overstate EDR is reserved, not implemented. Production fallback is broken.
